DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 23 - 33 and 34 - 46, drawn to an apparatus and its associated computer program product for providing a device shared access to a data stream, classified in class 709, subclass 231.
 - II. Claims 1 - 22 and 47 - 49, drawn to a method of communicating between one and a plurality of devices, classified in class 370, subclass 260.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

In this case the apparatus can be used to practice a process that does not provide the output to the device and the plurality of devices at substantially a same time wherein only the output from the application data stream is shared by the device and the plurality of devices (see claims 1 - 12), or wherein the output from the data stream is provided in a realtime manner based on the input from the device and input received from at least one other device (claim 13), wherein the input is non-blocking raw input that is received as the device generates the input on a

character by character basis (claim 14), cycling through entries in a data stream splitter table and receiving data from the client device identified in each entry based on the cycling through of the entries and sending the data from the client device to a bi-directional data stream (claims 15-22), simultaneously outputting the combined output at each of a plurality of devices (claim 47), providing the output to each of a plurality of devices at substantially a same time (claim 48), and displaying, substantially simultaneously, an output display based on the combined input from at least two of a plurality of devices (claim 49).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Steven Blount may be reached at 703 - 305 - 0319 Monday through Friday.
